

Bentley Issues Call for Nominations for the Year in Infrastructure 2019 Awards Program

February 27, 2019

Winners to be selected and announced at the
Year in Infrastructure 2019 Conference in Singapore

EXTON, Pa. – Bentley Systems, Incorporated, the leading global provider of comprehensive software solutions for advancing the design, construction, and operations of infrastructure, today announced its call for nominations for the [Year in Infrastructure 2019 Awards program](#). The awards, which are judged by independent juries of industry experts, recognize infrastructure projects for digital innovations that improve project delivery and/or asset performance.

The *Year in Infrastructure* Awards are an integral part of Bentley's annual [Year in Infrastructure Conference](#). The deadline for nominations is April 30, 2019.

Advancing BIM through Digital Twins is the theme of this year's conference, which takes place October 21 through 24 in Singapore at the Marina Bay Sands Expo and Convention Centre. Winners are announced at a gala and awards program during the conference.

Users of Bentley software are invited to enter their projects in the *Year in Infrastructure* Awards program, no matter which phase the project is in – preconstruction/conceptual, design, construction, or operations. The three finalists chosen for each awards category win a trip to Singapore to attend the *Year in Infrastructure 2019* Conference, as guests of Bentley Systems. As part of the conference, the finalists will present their projects before the judges, industry thought leaders, and more than 100 members of the media.

Every project nominated for an award receives recognition across the global infrastructure community. Through the *Year in Infrastructure* Awards program, participants:

- gain global recognition by having their infrastructure projects profiled in Bentley's [Infrastructure Yearbook](#), which is distributed in print and digital formats to media, government, and industry influencers around the world; all winners' and finalists' projects are featured on [bentley.com](#)
- enhance their competitive edge by demonstrating to existing and potential clients the value they add to projects through their digital innovations
- receive media coverage from global media and support from the Bentley team in marketing and promoting their respective projects to the media

The 18 *Year in Infrastructure 2019* Awards categories recognize advancements in going digital for the following categories:

- 4D Construction Modeling
- Bridges
- Buildings and Campuses
- Communications and Utilities
- Digital Cities
- Geotechnical Engineering
- Manufacturing
- Mining and Offshore Engineering
- Power Generation
- Project Delivery
- Rail and Transit
- Reality Modeling
- Roads and Highways
- Road and Rail Asset Performance
- Structural Engineering
- Utilities and Industrial Asset Performance
- Water and Wastewater Treatment Plants
- Water, Wastewater and Stormwater Networks

Additionally, projects that represent Bentley's mission of advancing infrastructure, but which transcend the narrower focus of the individual category awards, can be considered for Special Recognition awards including:

- **Advancements in Digital Twins for Project Delivery (*Project Digital Twins*)** for a project using a digital twin to gain useful insights, such as understanding the impact of change and design alternatives or highlighting issues with the quality of project data, to more effectively collaborate with the extended project team, or to model the performance of a project and its construction.
- **Advancements in Digital Twins for Asset Performance (*Performance Digital Twins*)** for projects

involving an operating infrastructure asset that uses a digital twin to gain useful insights to improve the performance of an operating asset –throughput, safety, compliance, maintenance – to evaluate the relative impact of different operational strategies, to support training of operational staff or to support remote operations of an asset.

- **Advancements in Sustainability and Resilience** for a project that has been designed or an infrastructure asset that is being operated to achieve better sustainability (lower carbon footprint, better use of renewables, reduced environmental impact) or higher resilience (ability to withstand and recover from man-made or natural disasters, adaptability to changing conditions).

For additional information about the *Year in Infrastructure Awards* program, or to nominate a project, visit the [Year in Infrastructure Awards website](#).
